BROOS WATER

Broos Water is an independent knowledge and consultancy company working in the field of water and environment. We highly value a sustainable countryside and a sustainable supply of clean water. In our work we seek to contribute to those issues by developing and deploying projects in cooperation with governments, businesses, organisations and farmers. The core of our work is to link policy and practice. Whether it concerns the system or the process, we work towards problem-solving projects which lead to new working methods, techniques, services and products and we create acceptance for their implementation. In our training and knowledge centre we train people working in the water technology sector. Additionally we provide support in the temporary staffing of specialists within your organisation.
