

I-REAL

I-REAL

The physical world around us comprises many water structures, installations, equipment and other types of water infrastructure and energy consumers. I-Real's advanced software, data loggers and PLC's connects all these components, irrespective of place, type, brand or supplier. The monitoring and control systems provide realtime information, enabling administrators to take the most efficient decisions at all times and to implement these automatically. We connect, you control!

Stationsweg 30
7061 CT Terborg
