

## NX FILTRATION

## NX FILTRATION

NX Filtration manufactures hollow fiber membranes and modules for use in ultrafiltration and nanofiltration applications. The low fouling, chlorine tolerant hollow fiber construction provides removal of organics, e.g. micro-pollutants, and salinity in one simple cost effective step. NXF's technology is ideally suited for waste water re-use applications and for polishing of surface water to drinking water standards. Other applications include decentralized water treatment, color removal, softening, and partial desalination for industrial, process and municipal applications.
