

H2MOTION

H2MOTION

Inspired by biomimetics, H2MOTION develops devices and systems based on the natural rotating flow in water. With the so-called Vortex technology, H2MOTION aims to reduce energy consumption and chemical usage in (waste)water treatment processes. Application areas are:

- Efficient aeration of wastewater
- Reduction of friction losses in distribution systems
- Optimal mixing of different media
- Suppressing algae growth in surface waters

Driven by passion and knowledge, H2MOTION wants to contribute to a more sustainable world.
