ABOUT WATER ALLIANCE

Water Alliance is a cluster organisation with a global network committed to accelerating the adoption of innovative water technologies. Water is a precious resource and we understand the urgency of finding sustainable solutions to address the world's water-related challenges. Through our extensive network of companies, research institutes, and utilities, we provide invaluable support to their members looking to tap into international markets.

We are a unique partnership of public and private companies, government agencies and knowledge institutions involved in the Dutch Water Technology. Committed to advancing global water and environmental technologies, we offer tailored services to our 210+ member companies, including (international) matchmaking, networking and strong support in entrepreneurship and business development. Elevating our efforts, we curate impactful booths at national and international trade fairs, orchestrating events that serve as catalysts for the growth of our esteemed members.

As of 1 January 2023, Water Alliance has seamlessly integrated with ENVAQUA, now operating under a unified force as Water Alliance. Our collaborative strength is further amplified through Expert Groups, facilitating knowledge exchange among active members in specialised domains. Our expert groups facilitate focused discussions among members in the same domain, identifying effective long-term solutions and navigating regulatory obstacles to collectively make a difference.

Benefit from our impactful presence at national and international trade fairs, our network of clusters all over the world and join us as we navigate the innovation ecosystem of the prestigious WaterCampus, of which we are one of the managing partners. Water Alliance is also a partner in the Enterprise Europe Network (EEN); an international network that helps businesses and research institutions in their international ambitions.

EXPERT GROUPS

THE POWER OF COLLECTIVE KNOWLEDGE

Expert Groups Foster Depth and Connection

The field of water and environmental technology, where Water Alliance members are active, is broad and diverse. It encompasses countless subfields, each contributing to solving major societal challenges. However, to truly make an impact, depth and specialization are just as crucial as breadth.

Inspiring Like-Minded Individuals

By joining one of our expert groups, members are enabled to dive deep into their specific area of expertise and collaborate on projects. This leads to focused discussions and the exchange of specialized knowledge and experiences. By challenging each other and approaching issues from diverse perspectives, we uncover which long-term solutions will have the greatest impact. At the same time, we identify obstacles, such as legal and regulatory barriers, that need to be addressed.

The Power of Collective Specialist Knowledge

Thanks to the strength of the Water Alliance – representing many members – and the in-depth expertise of the specialists in our expert groups, we can create a united front. Together, we leverage our collective influence to advocate for the necessary changes in laws and regulations, enabling innovative solutions to become reality.

Would You Like to Contribute to Our Expert Groups?

Are you interested in learning more, have specific questions, or want to become part of one or more of our expert groups? We are always open to welcoming enthusiastic companies to enrich our network. Contact us, and we'll be happy to share more details.

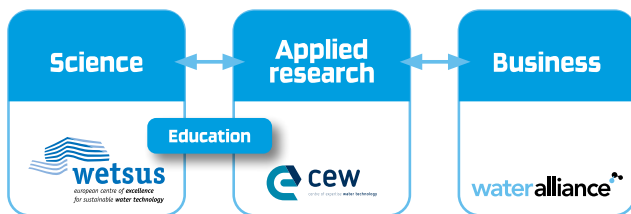

WATERCAMPUS LEEUWARDEN

HEART OF THE EUROPEAN WATER TECHNOLOGY HUB

WaterCampus Leeuwarden encourages cooperation between businesses, educational institutes and governments. This creates added value in innovation, education and entrepreneurship at a global level. WaterCampus offers a unique infrastructure for water technology research and is a meeting point for scientists and companies from all over Europe. A complete chain of innovation for water technology, from the initial idea, research & development, specialised laboratories, a water application centre, various demosites, the BioBizz Hub, launching customers to

international applications with commercial companies. It is driven by the idea that technological development and innovation are needed to develop new markets and thus create new business opportunities for the water technology industry. In this way the Netherlands will become the European Water Technology Hub, with its focal point at the WaterCampus Leeuwarden.

Together with Water Alliance, Wetsus (p.178), CEW (p. 45), CIV Water (p. 48) and Water Application Centre (p. 168), we create the WaterCampus Innovation Chain.
